DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Pradeep et al., U.S. Patent 5,866,448.

Pradeep et al. shows the invention as claimed including forming a conductive material over a semiconductor substrate 20; forming a block 42,44 over and physically against the conductive material, the block consisting of a photoresist and a single material other than photoresist 44 which is against the photoresist; and transferring a pattern from the block to the conductive material to pattern a transistor gate construction (see fig. 4) comprising the conductive material (see figs. 2-5 and col. 3-line 60 to col. 4-line 61).

With respect to claim 2, note that the block is subsequently removed (see col. 6-lines 45-48) and concerning claim 3 note the presence of the source/drain 48.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Application/Control Number: 10/635,715

Art Unit: 2812

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 12-13 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pradeep et al., U.S. Patent 5,866,448.

Pradeep et al. is applied as above but fails to expressly disclose the block structure being used to pattern a floating gate in an EPROM.

However, it would have been obvious to one of ordinary skill in the art at the time the invention was made to implement the patterning process of Pradeep et al. so as to form a floating gate electrode because the floating gate of an eprom is also made of similar structure and similar materials as the gate electrode of Pradeep et al.

Claims 4 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pradeep et al., U.S. Patent 5,866,448 as applied to claims 12-13 and 17 in view of Wolf et al., "Silicon Processing for the VLSI Era Volume 1: Process Technology".

Pradeep is applied as above but fails to expressly disclose wherein the photoresist releases an acid, and wherein the material other than photoresist is a coating which cross links when exposed to the acid from the photoresist.

Wolf et al. discloses performing a soft bake after a photoresist film is on the wafer which will inherently release acid from the wafer (see pages 434-437). In view of this disclosure, it would have been obvious to one of ordinary skill in the art to release acid from the photoresist layer of Pradeep et al. because this reduces stress, improves adhesion, and drives off solvent from the resist. Furthermore, it should be noted that

the material 44 is a coating which cross links when exposed to an acid from the photoresist.

Allowable Subject Matter

Claims 7-10 are allowed.

Terminal Disclaimer

The terminal disclaimer filed on 6/7/05 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of U.S. Patent 6,627,524 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Response to Arguments

Applicant's arguments filed 6/7/05 have been fully considered but they are not persuasive. Applicant argues that the Pradeep reference fails to show the invention since the language of the claim specifically recites that the block consists of photoresist and a single material other than photoresist. However, note that the preamble recites the word "comprising" and therefore other elements not claimed can be included in the reference and the reference can still read under 35 USC 102. Furthermore, what exactly constitutes the block is open to interpretation. For example, giving the claim its broadest reasonable interpretation, the block does not include layer 40 and therefore the rejection is proper.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Richard A. Booth whose telephone number is (571) 272-1668. The examiner can normally be reached on Monday-Thursday from 7:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Lebentritt can be reached on (571) 272-1873. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
